Testing

Virtual bank card (only for One-Time Dynamic products)

Description

HiPay Mobile lets you use a virtual bank card to test your payments; you will find it in your HiPay Mobile back office under the « Toolbox » category.

This virtual bank card number allows you to purchase YOUR products for test purposes.

Note

Test credit card number is only valid for discrete price points (payments up to 60€). You cannot use it for fixed price points.

Test codes

Description

To facilitate the testing of your integration, for each product set up on the HiPay Mobile merchant account, you can specify a test code that will always lead to an unbilled, successful transaction.

Code security

It is your responsibility to use strong enough test codes that won't be easily guessed or brute-forced by the end-user.

Note

The **Test codes** don't send any notification to your notification URL, if you want to test the notifications, please test them with **Free Codes**.

Free codes (only for One-Time Fixed products)

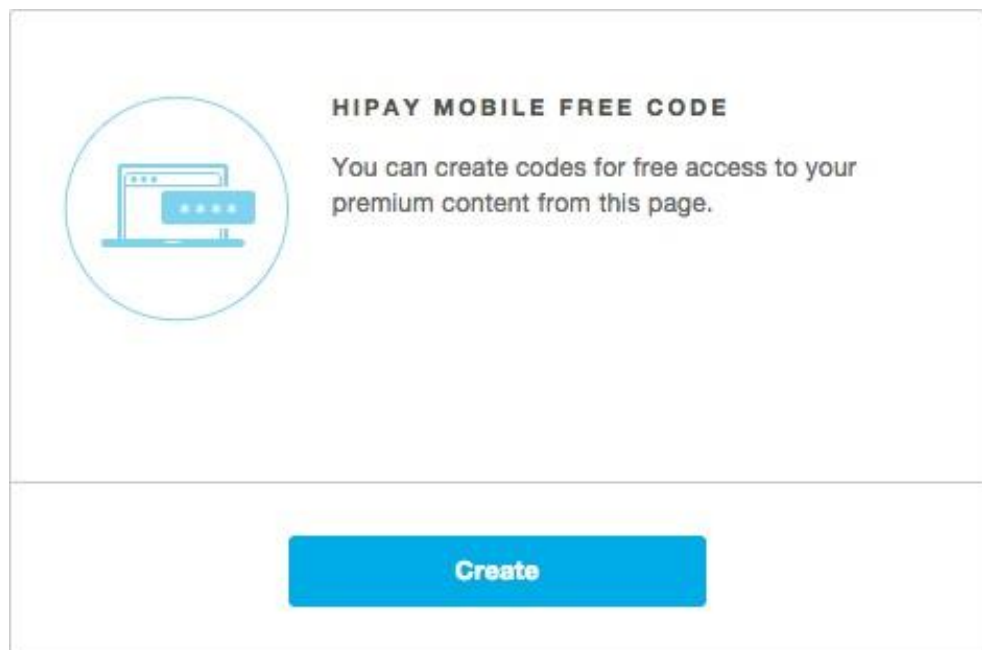

Description

Free codes are more sophisticated than test codes as they are meant to behave more like real codes.

Their validity can be adjusted by duration or number of uses, so they can be used for customer support as well.

Free code

You can generate free codes on your HiPay Mobile back office under the « Toolbox » category.

Note

Please note that these free codes are tied to specific product IDs. When using the API to generate transactions that are not associated with product IDs, you need to select "*Generic Product*" in the drop-down list.
